

PORTUS DIGITAL

1. Download the highlighted file from the Portus Website and save to Download folder

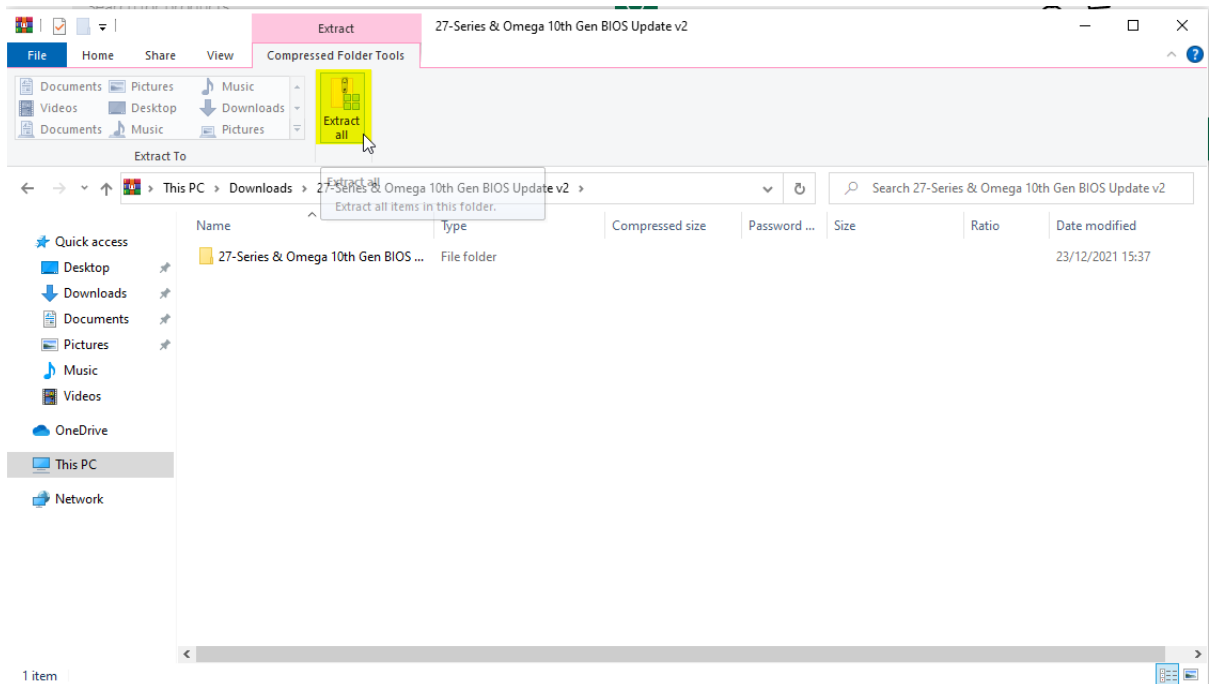

2. Once you have the file downloaded go to the file.

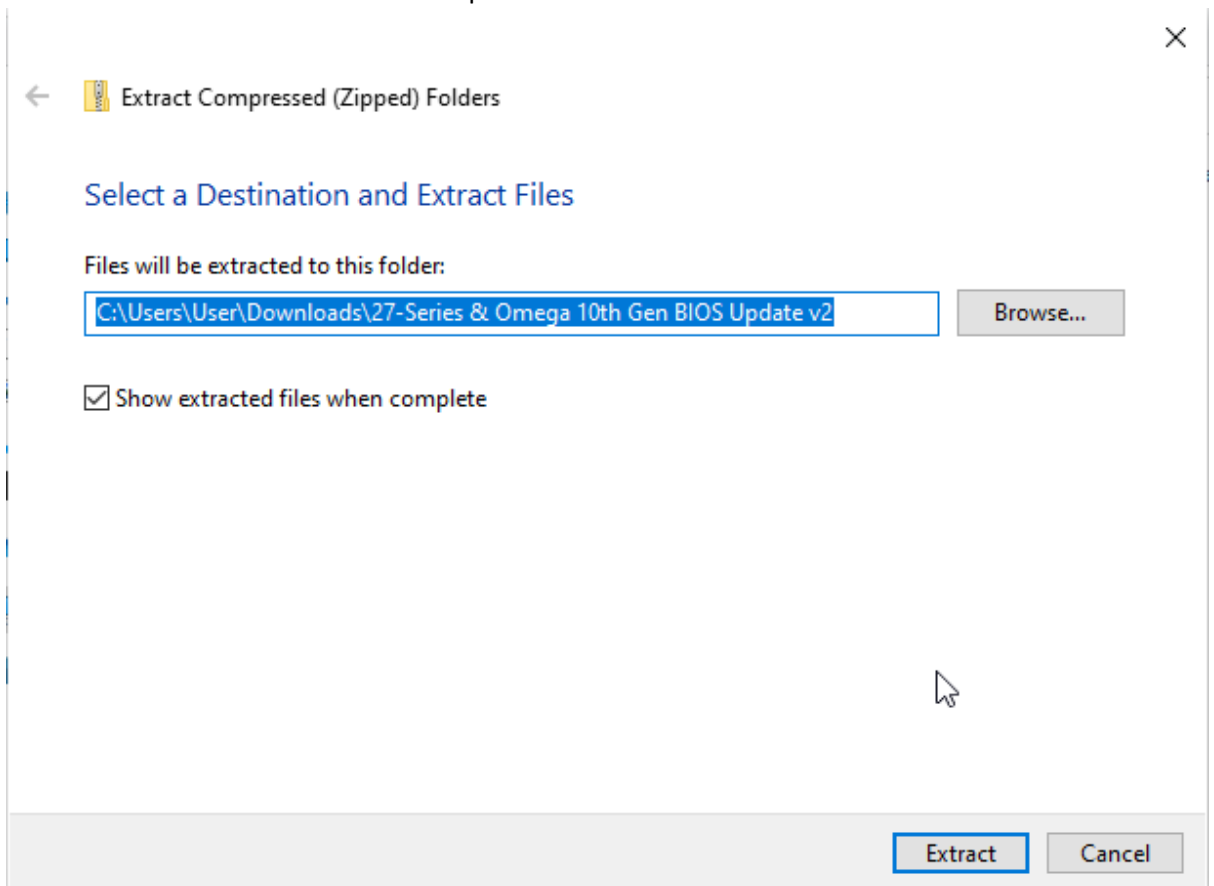

PORTUS DIGITAL

3. Select the file by clicking on it and then under the tab titled “Compressed Folder Tools” click Extract All.

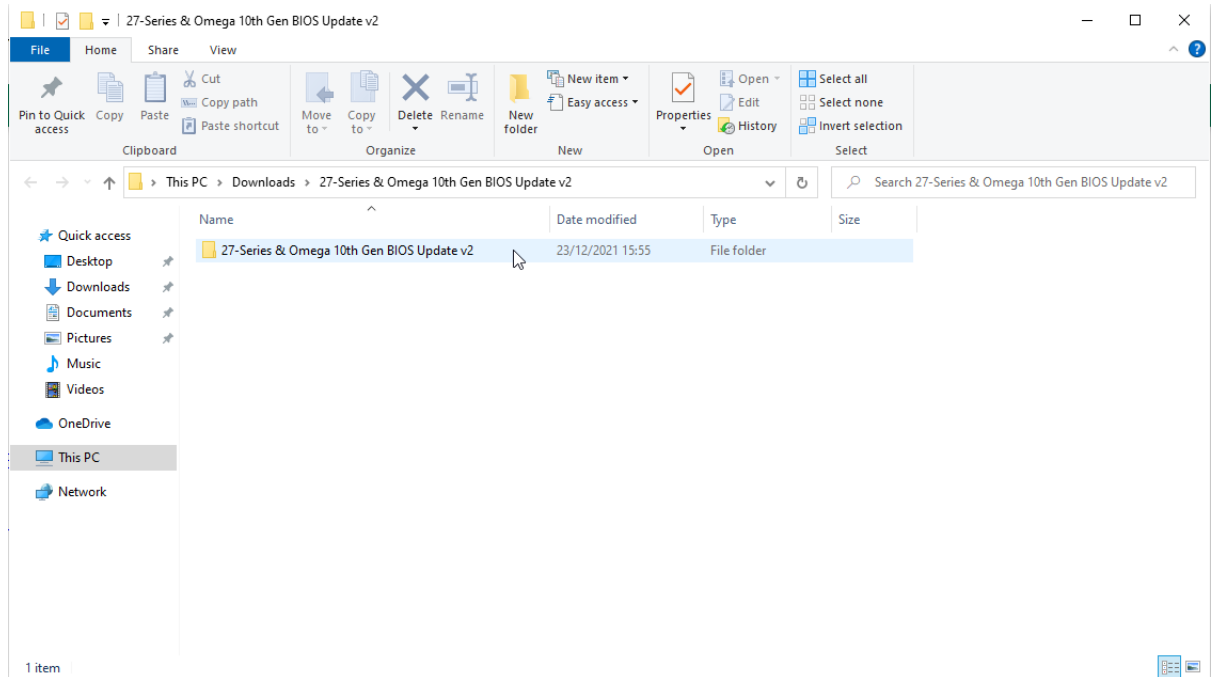

4. Select “Show extracted files when complete” and click extract.

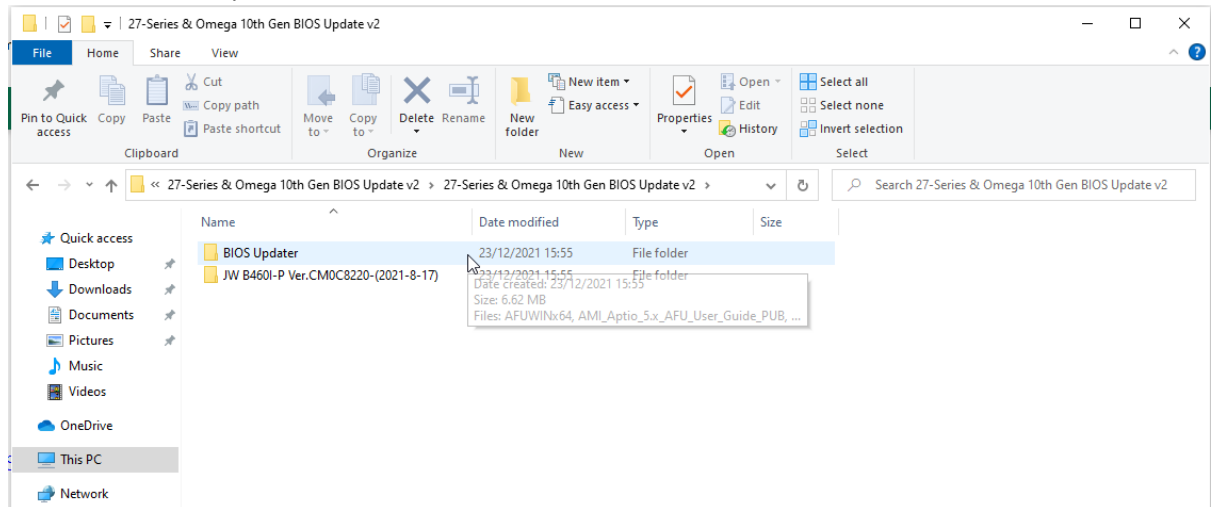

PORTUS DIGITAL

5. Once the file has been extracted open the folder

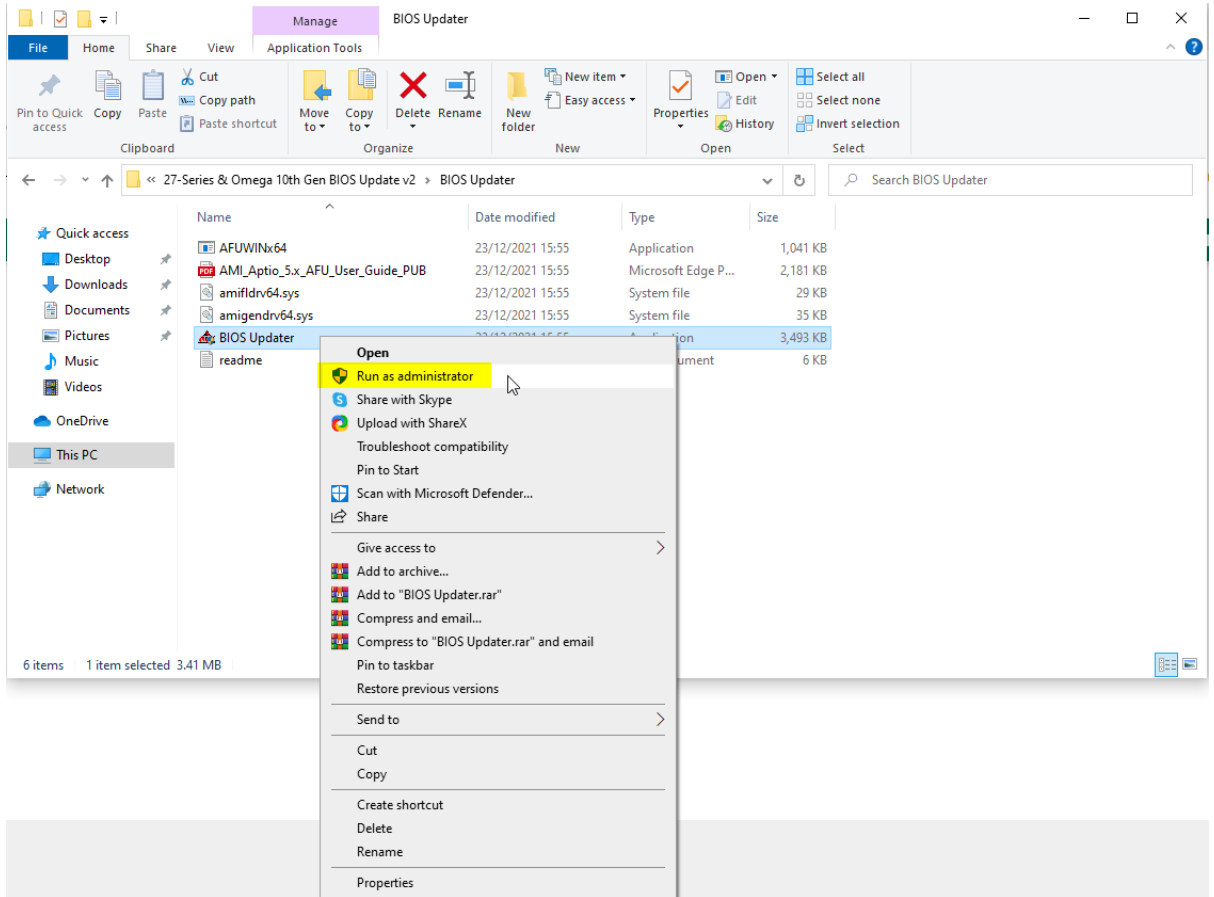

6. Go into the BIOS Updater folder

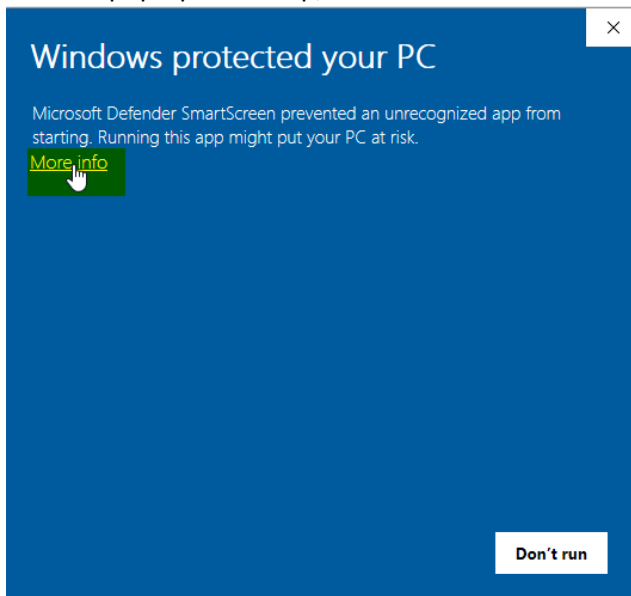

PORTUS DIGITAL

7. Right click the BIOS Updater application and Run as Administrator (accept any pop-ups)

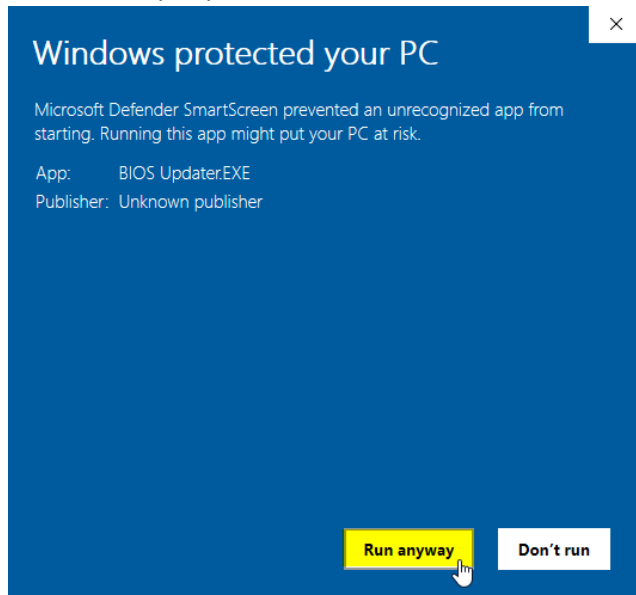

8. If a blue pop-up comes up, click "More info"

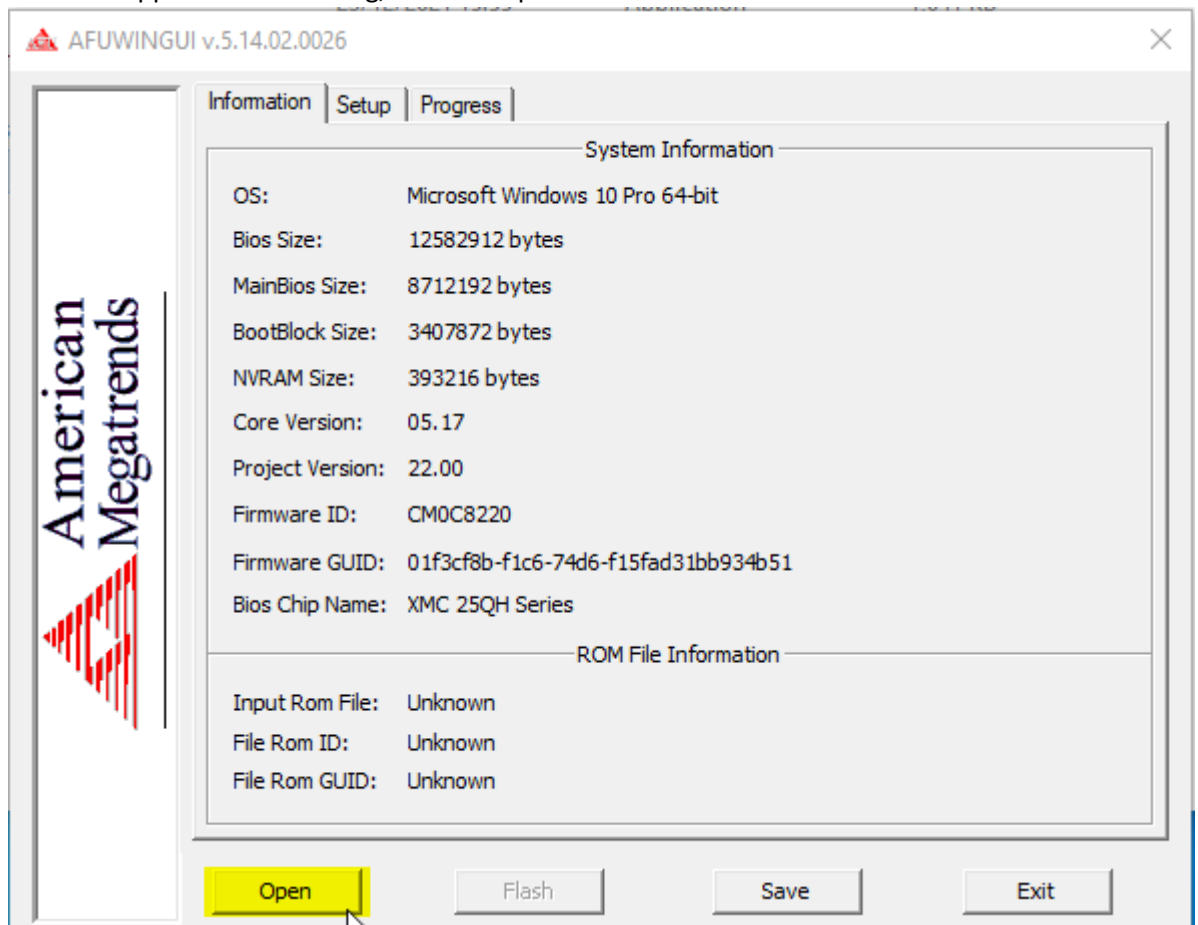

PORTUS DIGITAL

9. Click Run Anyway

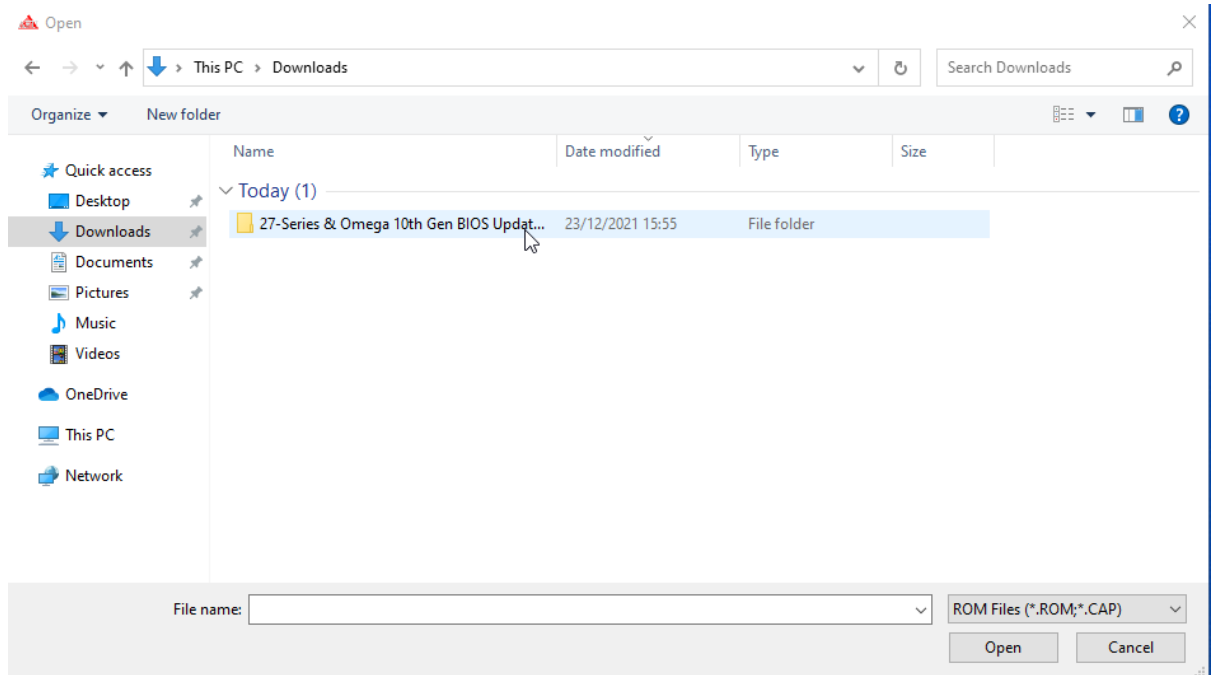

10. Once the application is running, click the Open button

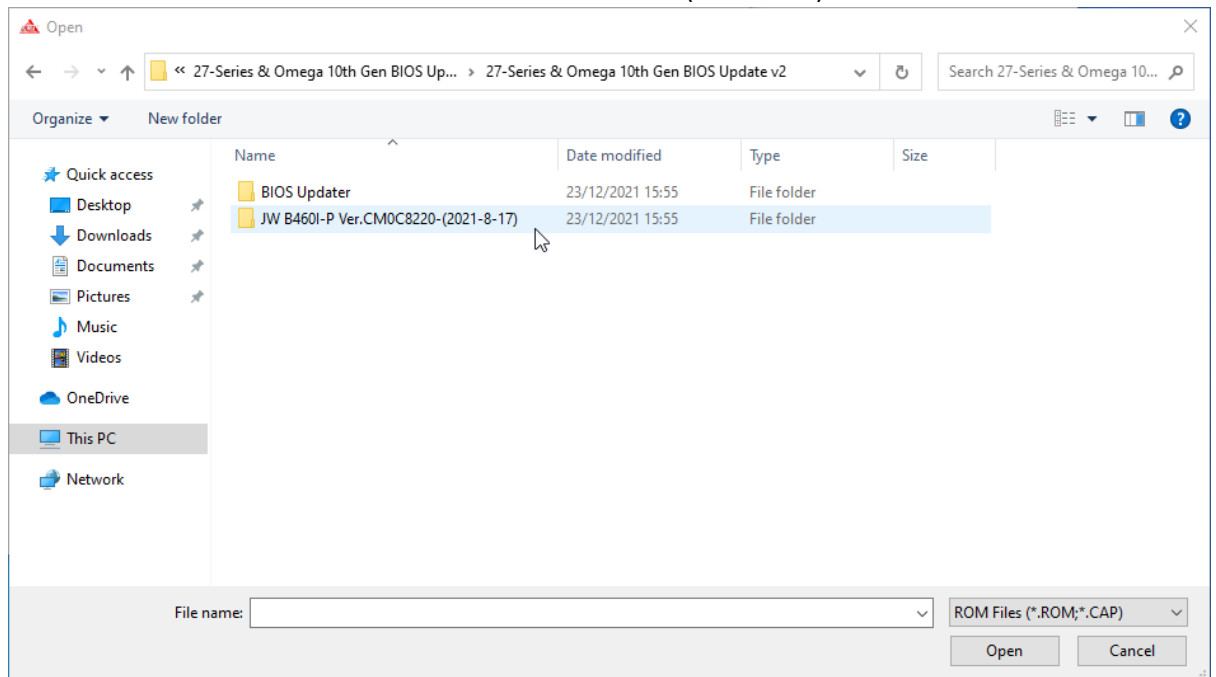

PORTUS DIGITAL

11. Navigate into the folder you extracted earlier

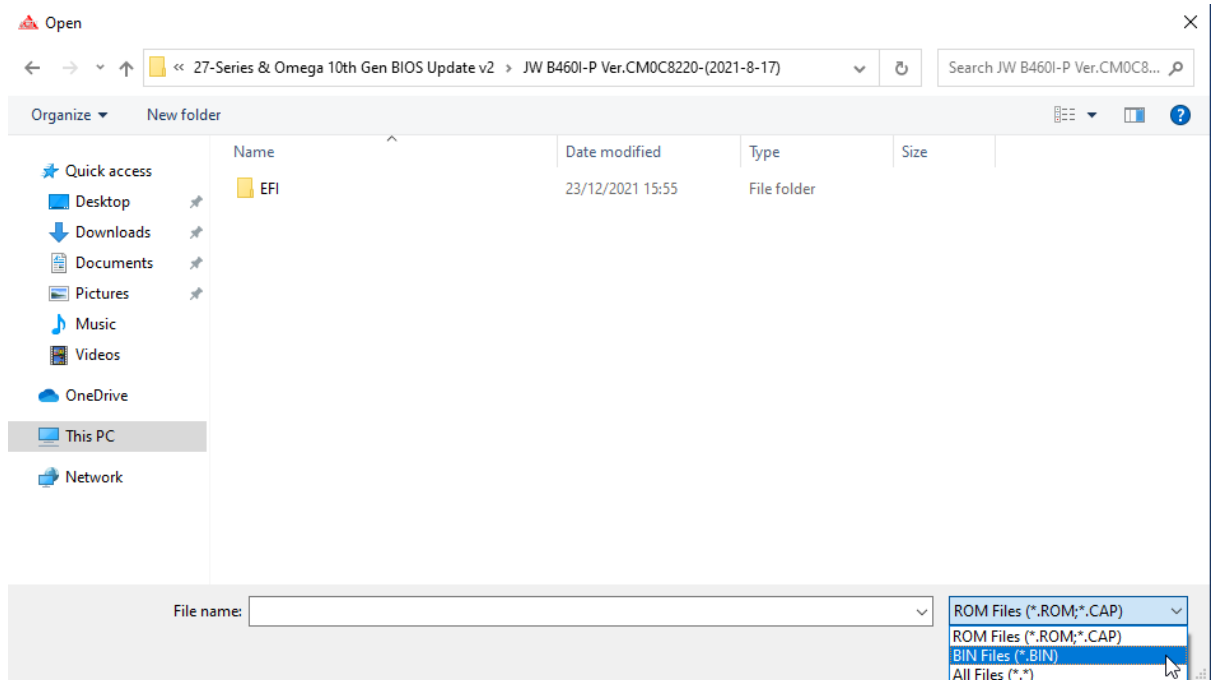

12. Then into the folder named "JW B460I-P Ver.CM0C8220-(2021-8-17)"

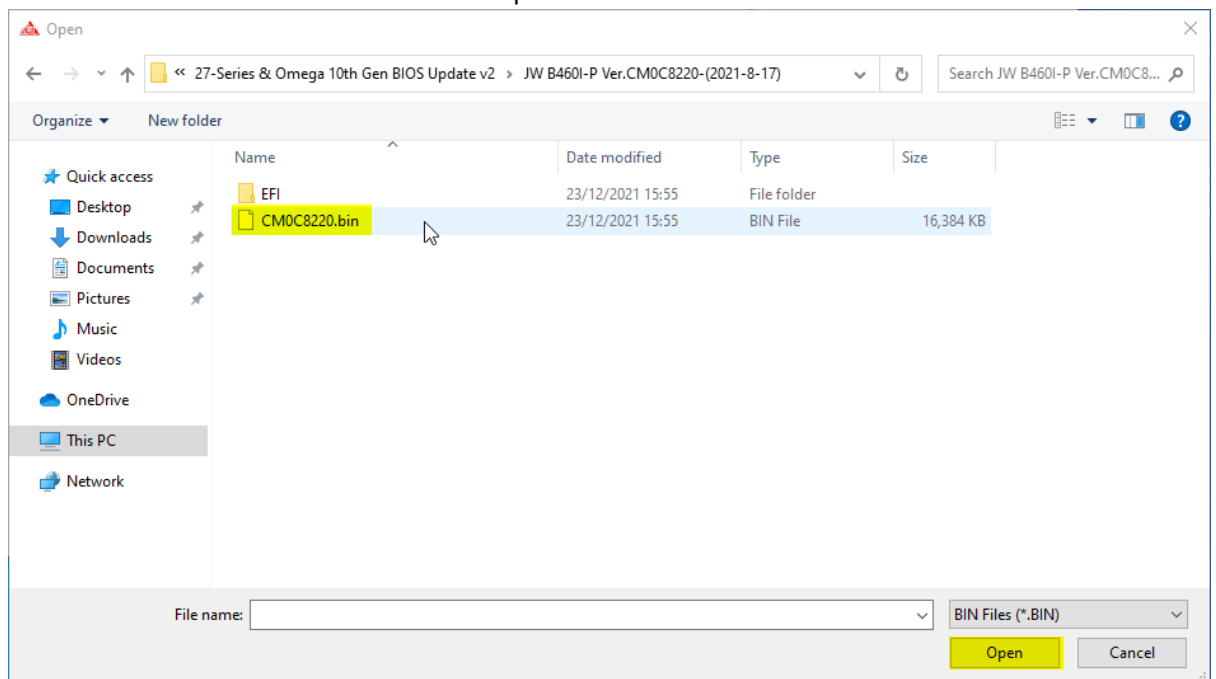

PORTUS DIGITAL

13. Next change the file extension type to BIN Files

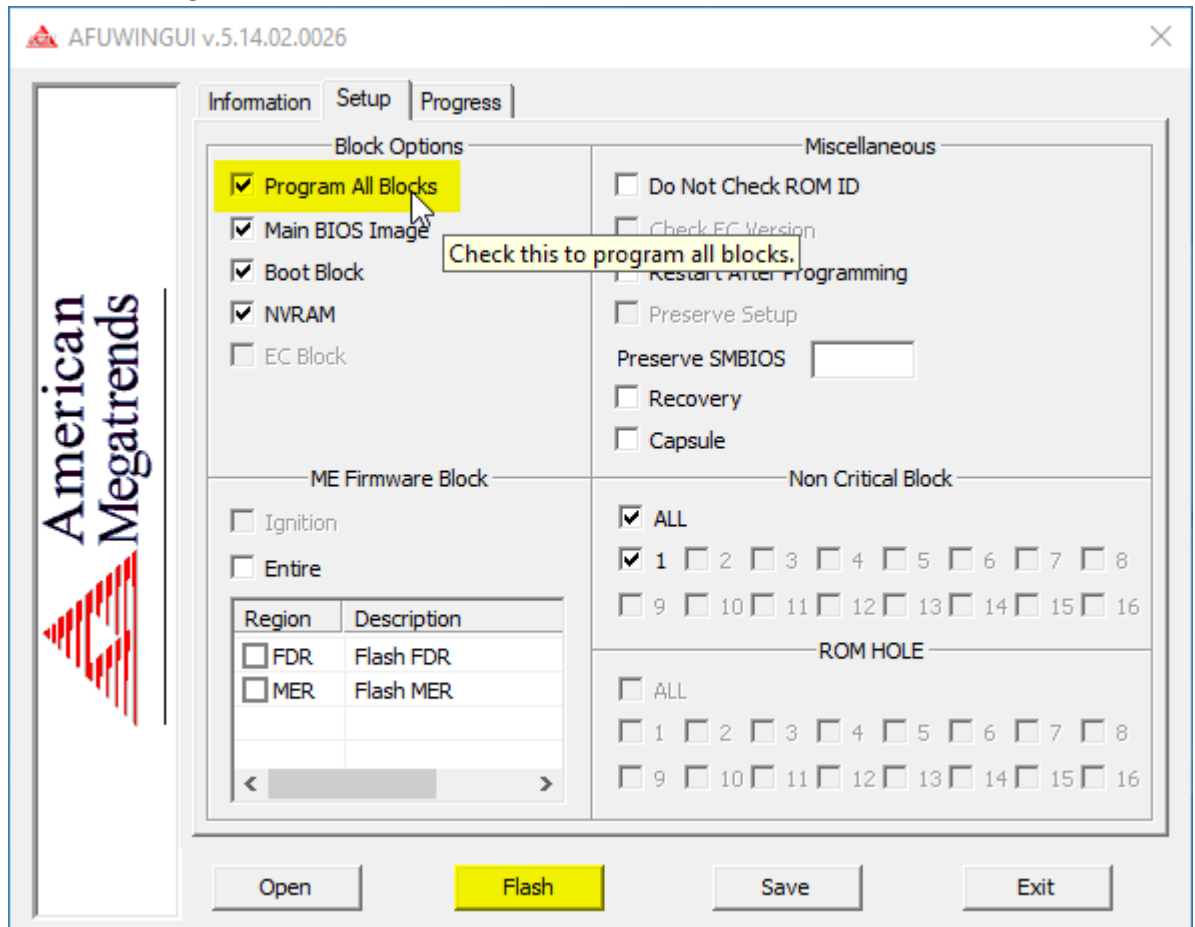

14. Select the file "CM0C8220.bin" and click Open

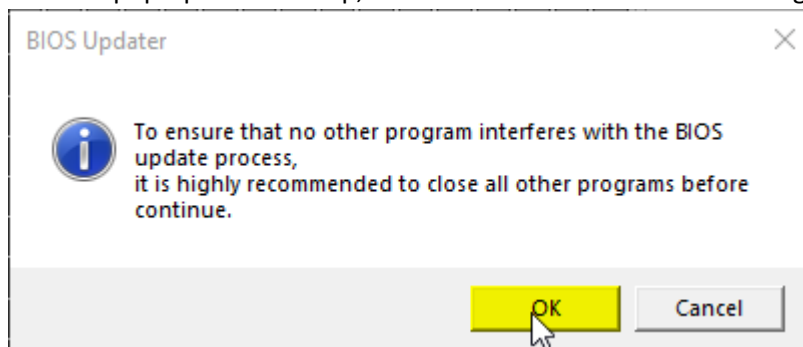

PORTUS DIGITAL

15. Select the "Program All Blocks" tick box and click Flash

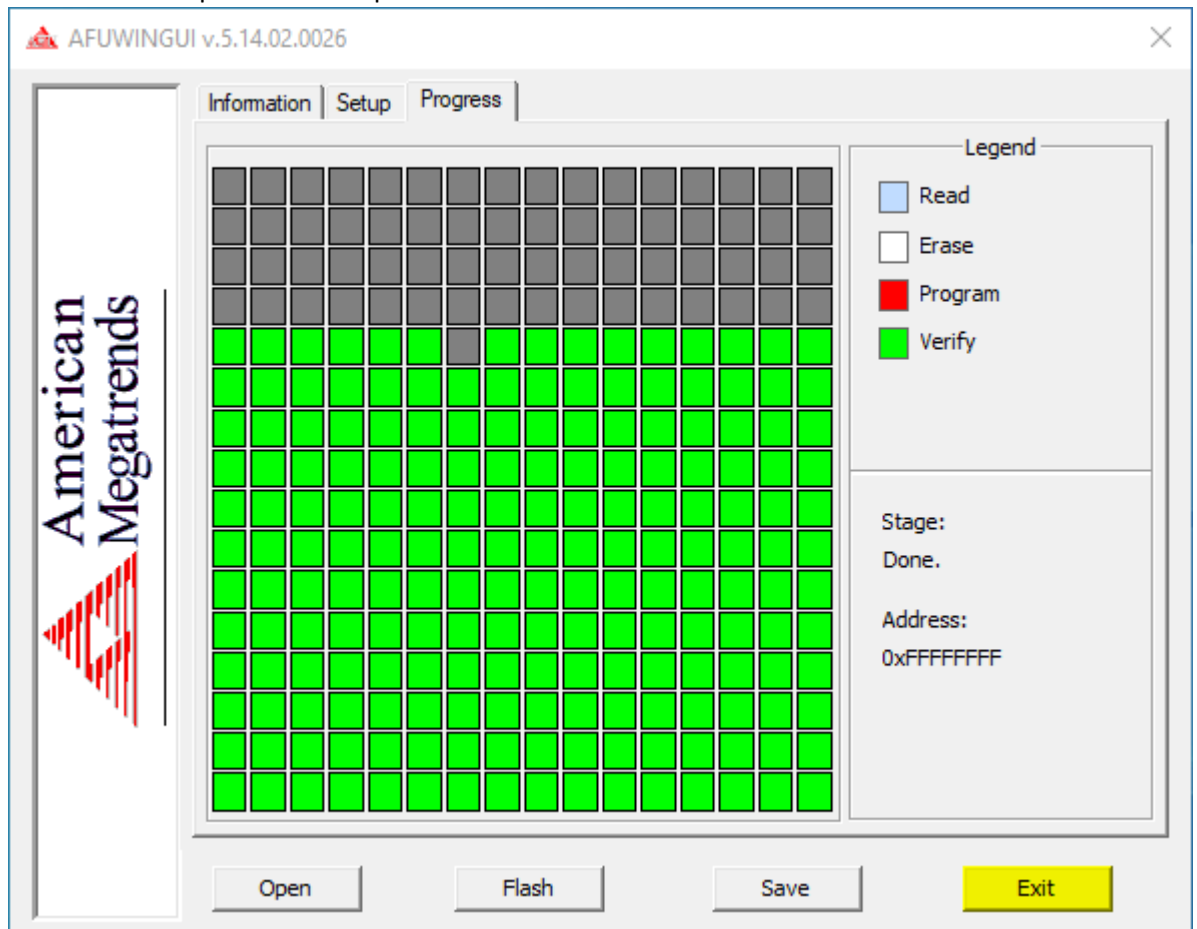

16. Another pop-up will come up, select Ok and the BIOS Flash will begin

PORTUS DIGITAL

17. Once the flash has completed (around 3 minutes) click Exit and restart.
The new BIOS Update has completed.
